

MOLD PROTECTION

A field study comparing FrameGuard® coated wood samples and uncoated controls has demonstrated the effectiveness of the protection. Exposed to the elements (not shielded from weather as in actual use) in the demanding environment of Ft. Myers, Fla., the test samples showed that FrameGuard coating provided excellent protection against mold growth on both southern pine and spruce/pine/fir.

After one year and 76.3" of rainfall, there was significantly less growth of mold on corresponding samples of FrameGuard® wood. Weather-shielded samples of FrameGuard® wood had virtually no mold after the year's test.

Another mold study, conducted by an independent firm, tested various alternatives and revealed the superiority of FrameGuard® wood. A copy of the report is available from Arch Wood Protection, Inc.
