

Protection against termites and decay, too.

Field installations and laboratory tests have shown FrameGuard® wood to be highly effective for inhibiting the growth of mold.

Untreated wood

FrameGuard® wood

FrameGuard® wood also protects against termites and fungal decay. The borate component is particularly effective against decay and termite damage.

Many homeowners have found that, against some termites, standard soil treatment alone is an inadequate defense. Some insects and decay fungi thrive above ground and are unaffected by

such chemical barriers. FrameGuard® wood provides protection against these insects.

Mold protection from the ground up.

Tell your builder or contractor that you want FrameGuard® mold- and pest-resistant wood. Invite them to visit our web site so that they can become better informed about the product and locate the nearest suppliers.

*and breathe happily
in your new home.*

Go green! You will know FrameGuard® wood when you see it. A distinctive green colorant identifies wood treated with FrameGuard® coating.

So you're building a new home! Did you know this is your one chance to install mold-resistant framing and prevent mold problems in the future? FrameGuard® mold-resistant wood is coated to:

- Protect against mold
- Protect against termite damage
- Protect against fungal decay

Your home is your sanctuary, and the most important investment of your lifetime. FrameGuard® mold-resistant wood gives you an added level of protection; plus, it's backed by a competitive limited warranty* and Arch Wood Protection, Inc., a leader in wood protection and licenser of the Wolmanized® brand of pressure-treated wood.

With FrameGuard® wood, you get built-in protection against costly repairs due to mold, termites and fungal decay. From the time the building materials arrive on the job site, throughout construction, and after you occupy the home, FrameGuard® mold-resistant wood continues to protect your family and your investment.

FACTS:

- Homeowner's insurance usually excludes or limits claims due to mold damage.
- Mold-related claims average \$15,000-\$30,000.
- Homeowners pay more than \$2 billion each year to replace wood with fungal and termite damage.

Sources: Wood Protection Council of National Building Sciences and the Weatherization Assistance Program.

Using FrameGuard® wood throughout your new home costs a fraction of mold-related damage claims. Using FrameGuard® wood makes good economic sense.

FrameGuard® treated wood is safe and effective. It is protected with carbon-based fungicides and a borate compound, proven to be effective.

The fungicides remain close to the surface to provide protection against mold; moldicides inhibit the enzymes' ability to break down the wood and consume the sugars and starches mold needs for growth. Meanwhile the borate component penetrates to wood providing protection against both decay and insects.
